TECHNICAL INFORMATION	2
PRODUCT RANGE	16
APPLICATIONS	1000
RACING CALIPERS	2000
PAD DRAWINGS	3000
BRAKE PADS XREF (COMPETITORS TO FERODO)	4000

ISO/TS 16949 & ISO 14001 Certified Production

All **Ferodo** Racing brake pads are manufactured to the highest international ISO quality standards at Federal Mogul's dedicated manufacturing facility in Italy.
Every brake pad has a total of 26 separate quality controls during its manufacture which guarantees a repeatable and consistent product within and between every batch.

Precision Engineering

All of the pad back-plates are manufactured from high tensile steel meaning minimum distortion when subjected to the high clamping forces common in motorsport use.
Pads are manufactured to maintain high tolerances on the pad and back-plate dimensions including : flatness , parallelism and overall thickness.
This results in a rapid and uniform transmission of pressure from the brake system to the pads.

Thermal Under-layer

Unlike many competitive products all **Ferodo** Racing brake pads incorporate a thermal under-layer between the backing-plate and the friction material.
This reduces the brake caliper's operating temperature by up to 80 deg C and significantly reduces the risk of boiling the brake fluid which causes a "spongy" feeling in the pedal.

Disc Friendly

Unlike many competitive products **Ferodo** pads are kind on brake discs.
Ferodo pads are developed to optimize both the pad and disc life. Our philosophy is not to increase pad life with the casualty of excessive disc wear.

High Controllability

All **Ferodo** Racing brake pads are engineered to perform with a relatively constant coefficient of friction (mu) across a wide range of temperatures , pressures and vehicle speeds.
This results in a consistent brake feel for the driver meaning that the braking torque is a linear response to pedal pressure.

Wide Range of Material choices and Fitments

Ferodo Racing has one of the widest range of pad shapes in the racing/performance brake pad market.
This fitment range is available with the necessary compound choice meaning that there is nearly always a solution to your needs.

COMPOUNDS & SUFFIXES

EN INTRODUCTION

This catalogue details the Ferodo range of racing brake pads. Designed for ease of use by both Distributors and Racing Teams, the catalogue contains application/compound data and product shape illustrations.

PART NUMBER SUFFIXES

All part numbers in the range section of this catalogue feature a suffix. This suffix identifies the material compound available for each part number

- H DS2500
- C 4003
- R DS3000
- W DS1.11
- Z DSUNO

Many part numbers are available in more than one material and are therefore listed accordingly with different suffixes. For example:
(FRP3001H = DS2500, FRP3001C = 4003,
FRP3001R = DS3000, FRP3001W=DS1.11, FRP3001Z=DSUNO)

COMPOUND SELECTION

As a general guide we recommend that you consider the following when making your material compound selection:
4WD cars = same compound front and rear
Rear traction cars = same compound front and rear.
Front traction cars = high friction level in the front axle (i.e. DS3000), lower friction level on the rear axle (i.e. DS2500, 4003).
For further advice please contact Ferodo Racing.

I INTRODUZIONE

Il catalogo Ferodo Racing è uno strumento di lavoro che permette alla rete di distribuzione Ferodo ed ai Teams di scegliere correttamente la figura della pastiglia e la mescola per ottenere la miglior efficienza dell'impianto frenante.

SIGNIFICATO DEI SUFFISSI

Il suffisso viene utilizzato per identificare la mescola:

- H DS2500
- C 4003
- R DS3000
- W DS1.11
- Z DSUNO

Pertanto, lo stesso numero di codice (es. FRP3001) potrá essere accompagnato da differenti suffissi che indicheranno la mescola richiesta
(FRP3001H =DS2500, FRP3001C = 4003,
FRP3001R = DS3000,FRP3001W=DS1.11,
FRP3001Z=DSUNO).

SCELTA DELLA MESCOLA

Una regola che potete utilizzare con le mescole Ferodo Racing:
Vetture a 4 ruote motrici = stessa mescola per anteriore e posteriore.
Vetture a trazione posteriore = stessa mescola per anteriore e posteriore.
Vetture a trazione anteriore = mescola ad alto coefficiente d'attrito sull'anteriore (es. DS3000) ed a minor coefficiente d'attrito per il posteriore (es.DS2500 o 4003).
Per ulteriori informazioni contattare la Ferodo ai numeri riportati su questo catalogo.

F INTRODUCTION

Le catalogue Ferodo Racing est un outil convivial qui permet aux réseaux de distribution et aux écuries de course de choisir la bonne plaquette et la qualité la meilleure pour gagner les courses.

SUFFIXES

Chez Ferodo, nous utilisons des suffixes pour identifie les matériaux :

- H DS2500
- C 4003
- R DS3000
- W DS1.11
- Z DSUNO

Pour cette raison, vous pouvez trouver la même référence (par ex: FRP3001) qui identifie la forme de la plaquette avec suffixes différents qui déterminent les qualités
(FRP3001H = DS2500, FRP3001C = 4003,
FRP3001R = DS3000, FRP3001W=DS1.11, FRP3001Z=DSUNO)

CHOIX DES MATERIAUX

Quelques conseils pour le choix des matériaux en fonction de la motricité des véhicules:
Pour les 4 roues motrices = même qualité à l'avant et l'arrière.
Pour les propulsions = même qualité à l'avant et l'arrière.
Pour les tractions = haut niveau de friction à l'avant (exemple DS3000) et plus faible niveau de friction à l'arrière (exemple DS2500, 4003).

E INTRODUCCION

El catálogo Ferodo Racing es una herramienta de fácil utilización, que permite a los distribuidores y a los equipos de competición, seleccionar la aplicación correcta de la pastilla de freno y el compuesto adecuado, para la obtención del redimiento más elevado y así poder alcanzar los mejores resultados deportivos.

SUFIJOS

Los diferentes compuestos de los materiales Ferodo Racing, se identifican con los siguientes sufijos:

- H DS2500
- C 4003
- R DS3000
- W DS1.11
- Z DSUNO

Por esta razón, se puede encontrar el mismo número de refencia de pastilla (por ejemplo: FRP3001) que identifica la forma de está, con distintos sufijos para determinar los diferentes compuestos Ferodo Racing
(FRP3001H = DS2500, FRP3001C = 4003,
FRP3001R = DS3000, FRP3001W=DS1.11, FRP3001Z=DSUNO)

ESCOGER EL COMPUESTO

Criterios de selección para la utilización de los diferentes compuestos:
Vehículos con cuatro ruedas motrices (4WD) = mismo compuesto delante y detrás.
Vehículos con tracción trasera = mismo compuesto delante y detrás.
Vehículos con tracción delantera = alto coeficiente de fricción en el eje delantero (por ejemplo, DS3000), bajo coeficiente de fricción en el eje trasero (por ejemplo, 4003).

D EINFÜHRUNG

Der Ferodo Racing Katalog ist ein anwenderfreundliches Werkzeug, daß den Händlern und den Rennteams erlaubt, den richtigen Belag in der richtigen Qualität zu wählen, um Rennen zu gewinnen.

SUFFIX

Ferodo benutzt eine Kurzbezeichnung (Suffix) die Qualität für:

H DS2500
C 4003
R DS3000
W DS1.11
Z DSUNO

Aus diesem Grund finden Sie die Teile-Nr. (z.B. FRP3001) die die Belagabmessung bestimmt mit verschiedenen Kurzbezeich- nungen für die jeweilige Ferodo Racing Qualität.
(FRP3001H = DS2500, FRP3001C = 4003,
FRP3001R = DS3000, FRP3001W=DS1.11, FRP3001Z=DSUNO)

QUALITÄTEN AUSWAHL

Kurzempfehlung für die richtige Auswahl der Qualität:
Allradfahrzeuge = gleiche Qualität vorn + hinten.
Hinterradangetriebene Fahrzeuge = gleiche Qualität vorn + hinten.
Vorderradangetriebene Fahrzeuge = Hoher Reibwert für die Vorderachse (z.B. DS3000).
Niedrigerer Reibwert für die Hinterachse (z.B. DS2500,4003).

日本語 ご紹介

レーシングチーム様、代理店様のともに使用しやすいようこのカタログはフェロードのレーシングブレーキパッドの詳細（使用目的、材質データー、形状図）をご案内しております。

パーツ番号

品番の最後にアルファベットがつけてあります。下記の通り材質ごとに異なります。

H DS2500
C 4003
R DS3000
W DS1.11
Z DSUNO

ひとつの品番でも複数の材質がご用意してあるものがあります。
(FRP3001H =DS2500, FRP3001C = 4003,
FRP3001R = DS3000,FRP3001W=DS1.11,
FRP3001Z=DSUNO).

コンパウンドの選択

一般的なコンパウンド選択のガイダンスをご案内いたします。
4WD 車輌 = 前後同じ材質
FR 車輌 = 前後同じ材質
FF 車輌 = フロントにμの高い材質 (例 DS3000), リアに低いμの材質 (例 DS2500,4003).
ご質問がありましたらフェロードレーシングまたは代理店にお問い合わせ下さい。.

中文 簡介

本目錄記載了 Ferodo 賽車及高性能煞車片資料。方便業界及參賽人仕使用。本目錄亦提供了以下資料:-
1. 車輛型號對應表
2. 煞車片物料選擇
3. 煞車片圖樣及呎吋。

煞車片物料的代號(尾碼)

所有煞車片型號都包否一個尾碼，這代表不同的物料!

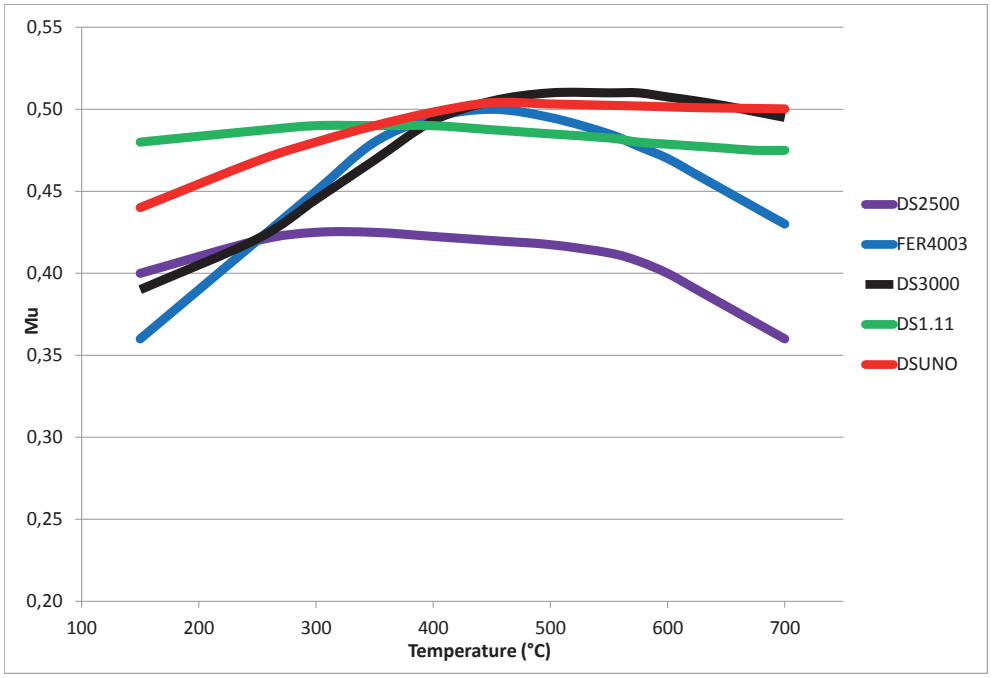
H DS2500
C 4003
R DS3000
W DS1.11
Z DSUNO

很多型號煞車片都會生產多於一種物料
所以需要依靠尾碼來區分。
(FRP3001H = DS2500, FRP3001C = 4003,
FRP3001R = DS3000, FRP3001W=DS1.11, FRP3001Z=DSUNO)

煞車片物料的選擇

一般情況下，我們會提供以下建議:-
4WD (四驅車)=頭皮及尾皮(選用相同物料)
尾驅車=頭皮及尾皮(選用相同物料)
頭驅車=頭皮要比尾皮性能較高(例如頭用DS3000,尾用DS2500)
如需要更多資料，請向 Ferodo Racing 查詢。

EN FERODO RACING COMPOUNDS



DS1.11 (W)
- Heavy duty endurance material
- Applications - touring car, GT, single seat
- Average friction coefficient 0.46 over working temperature range of 200°-700°C
- Long life
- Very kind to discs

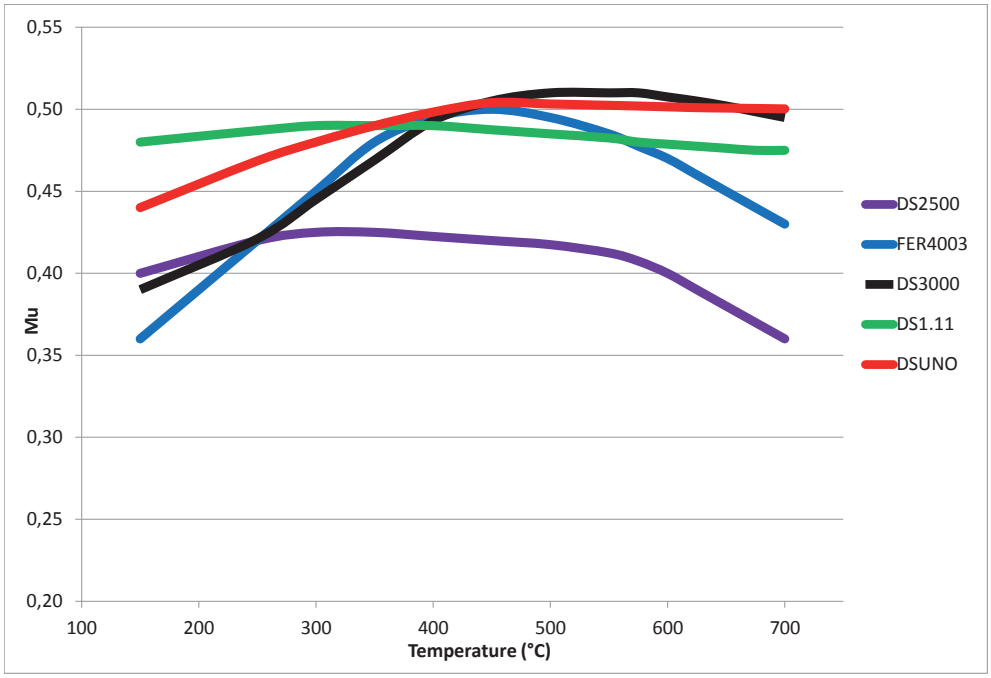
DSUNO (Z)
- Heavy duty semi-endurance material
- Applications – touring car, GT, single seat, rally
- Average friction coefficient 0.48 over working temperature range of 200°-700°C
- Very controllable torque output
- Very kind to discs
- Long life

DS2500 (H)
- Track day & light race use for all vehicle types
- Road style refinement but with race material ability to withstand heat with respect to life and μ
- Average friction coefficient of 0.42 over working temperature range of 20°-500°C

DS3000 (R)
- Heavy duty all-round material choice
- Multiple applications – touring car, rally, single seat
- Average friction coefficient 0.48 over working temperature range of 200°-650°C

FER4003 (C)
- Light/medium duty race material specifically for Formula cars
- Applications – Formula cars, occasional rally
- Average friction coefficient 0.46 over working temperature range of 200°-450°C
- Very short bedding time
- Excellent bite
- Low drag & Excellent release
- Offers control to avoid wheel lock when downforce reduces

FERODO RACING COMPOUNDS



DS1.11 (W)
- Materiale per gare di durata, utilizzi estremi
- Utilizzi - turismo, GT, monoposto
- Coefficiente d'attrito medio 0.46 tra 200°-700°C
- Lunga durata
- Bassa usura dei dischi

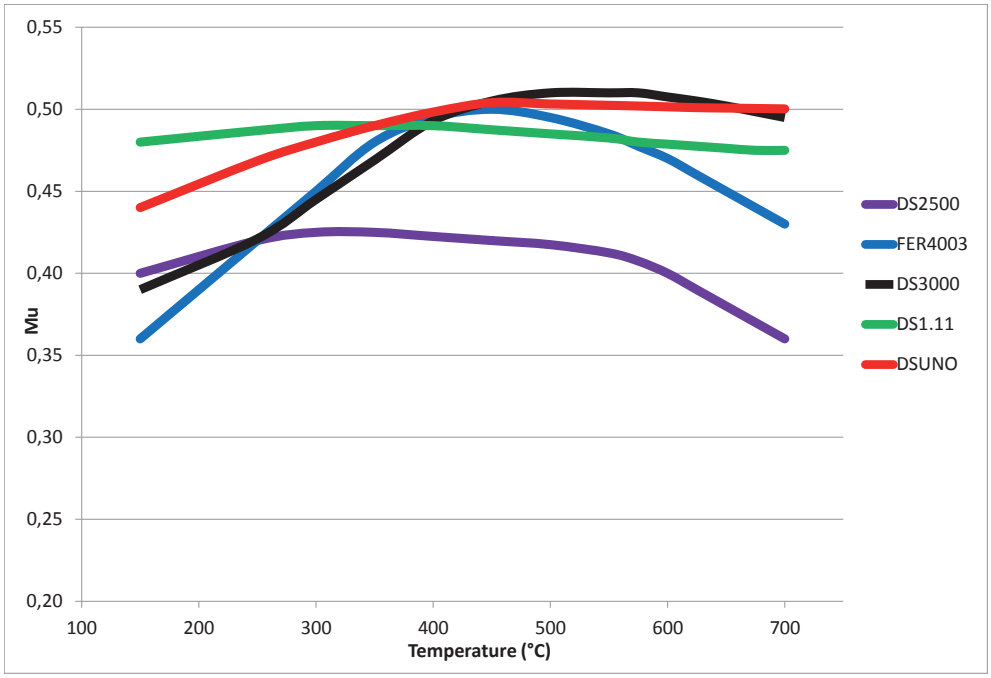
DSUNO (Z)
- Materiale per uso semi-endurance (3 / 6 ore)
- Utilizzi - turismo, GT, monoposto, rally
- Coefficiente d'attrito medio 0.48 tra 200°-700°C
- Livello d'attrito facilmente modulabile
- Bassa usura dei dischi
- Lunga durata

DS2500 (H)
- Utilizzabile per uso privato in pista e per gare soft da tutti i tipi di veicoli
- Confort stradale ma proprietà del materiale di resistere al calore garantendo buona durata e livello d'attrito superiore al ricambio originale
- Coefficiente di attrito medio di 0.42 tra 20°-500°C

DS3000 (R)
- Materiale ad alte prestazioni con ottima adattabilità
- Utilizzi multipli - turismo, rally, monoposto
- Coefficiente d'attrito medio 0.48 tra 200°-650°C

FER4003 (C)
- Materiale corsa per applicazioni medio-leggere specifico per vetture Formula (da 500 a 1100 Kg)
- Utilizzi – Vetture Formula e rally
- Coefficiente d'attrito medio 0.46 tra 200°-450°C
- Tempo di rodaggio molto breve
- Ottimo attacco iniziale
- Bassa coppia residua e ottimo rilascio pedale
- Facilmente modulabile (anti bloccaggio ruota in casi di riduzione di downforce)

F FERODO RACING COMPOUNDS



DS1.11 (W)

- Matériau endurant pour applications sévère
- Applications multiples – berlines, GT, monoplaces
- Coefficient de friction moyen de 0.46, plage de température comprise entre 200°C et 700°C
- Longue durée de vie
- Peu agressif avec les disques

DSUNO (Z)

- Matériau de semi endurance pour applications sévères
- Applications multiples – berlines, GT, monoplaces, rallye, circuit
- Coefficient de friction moyen de 0.48, plage de température comprise entre 200°C et 700°C
- Couple très contrôlable, dosage facile
- Très peu agressif avec les disques
- Longue durée de vie

DS2500 (H)

- Circuit club et usage sportif pour tous types de véhicules
- Pour une conduite typée route, mais avec les capacités d'un matériau de course résistant aux hautes températures et qui limite l'usure due à la friction.
- Coefficient de friction moyen de 0.42, sur une plage de température comprise entre 20°C et 500°C

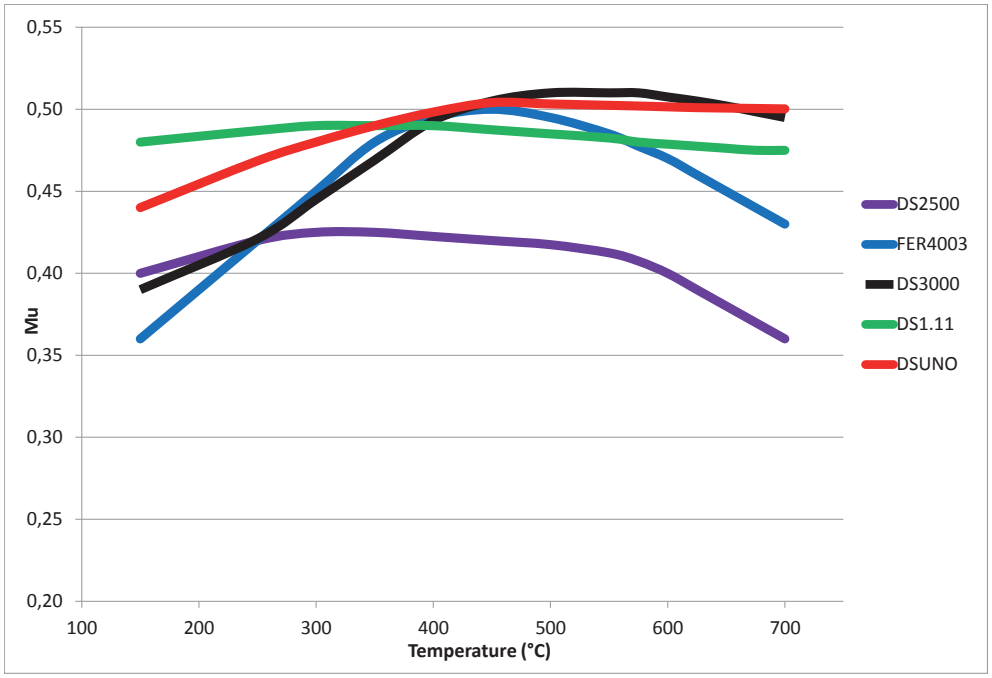
DS3000 (R)

- Matériau pour tous types d'applications sévères
- Applications multiples - berlines et monoplaces, circuit et rallye
- Coefficient de friction moyen de 0.48, plage de température comprise entre 200°C et 650°C

FER4003 (C)

- Matériau de course pour applications légères/moyennes, développé spécifiquement pour les voitures type Formule monoplace
- applications monoplace, éventuellement rallye
- Coefficient de friction moyen de 0.46, plage de température comprise entre 200°C et 450°C
- Temps de rodage très court
- Excellent mordant
- Peu de couple résiduel au lâcher de pédale, mais attaque franche
- Permet un excellent dosage afin d'éviter les blocages de roue en perte d'adhérence.

E FERODO RACING COMPOUNDS



DS1.11 (W)

- Material para carreras largas
- Aplicaciones: turismo, GT, Formula
- Coeficiente de friccion medio 0,46 entre 200 y 700°C
- Larga vida
- No es agresivo con los discos

DSUNO (Z)

- Material para carreras sprint de duracion media(3 horas)
- Aplicaziones: turismo, GT, Formula, Rally
- Coeficiente de friccion medio 0,48 entre 200 y 700°C
- Facilmente modulable
- Desgasta muy poco los discos
- Buena vida de el producto

DS2500 (H)

- Material para circuito y carreras suaves para todos los vehiculos
- Uso deportivo en carreteras con mayor aguante de el calor, mayor vida y mejor nivel de friccion
- Coeficiente de friccion medio de 0,42 estable entre 20 y 500°C

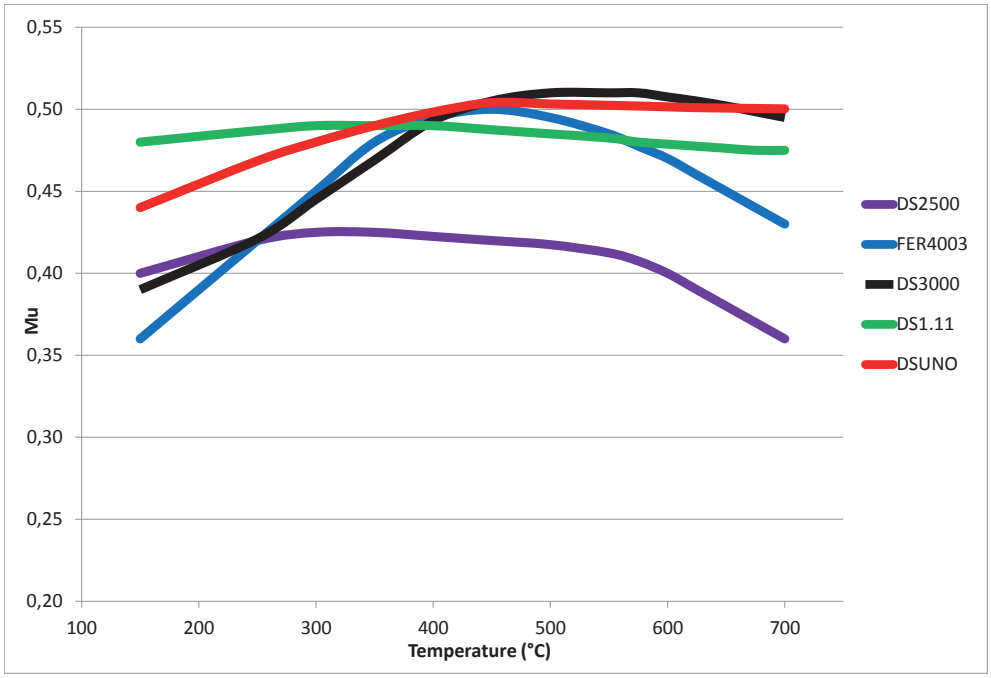
DS3000 (R)

- Material para competiciones de qualquier tipo
- Multiples aplicaciones : turismo, rallies y formulas
- Coeficiente de friccion medio de 0,48 entre 200 y 650°C

FER4003 (C)

- Especifico para coches Formula y lijeros
- Aplicaciones: Formula y rallies
- Coeficiente de friccion medio 0,46 entre 200 y 450°C
- Tiempo de rodaje muy bajo
- Ataque inicial muy alto
- Fricción residual en las ruedas muy baja
- Es muy sencillo prevenir el blocaje de las ruedas cuando el downforce se reduce

D FERODO RACING COMPOUNDS



DS1.11 (W)

- Langstreckentauglich, für harte Einsatzbedingungen
- Einsatzmöglichkeiten: Tourenwagen, GT und Einsitzer
- Durchschnittlicher Reibungskoeffizient bei 0,46
- Temperaturbereich 200 – 700 Grad C
- Hohe Lebensdauer
- Geringer Verschleiß der Scheiben

DSUNO (Z)

- Für erschwerte Rennbedingungen, teilweise Langstrecken tauglich.
- Anwendungen: Tourenwagen, GT-Klassen, Einsitzer, Rally.
- Durchschnittlicher Reibungskoeffizient bei 0,48.
- Temperaturbereich 200 – 700 Grad C.
- Bremskraft gut zu dosieren.
- Relativ geringe Scheibenabnutzung.
- Hohe Lebensdauer.

DS2500 (H)

- Für “Track Days” und “leichte” Rennen gedacht, geeignet für alle Arten von Fahrzeugen
- Verbesserte Straßeneigenschaften, Verwendung von Rennmaterialien mit besserem Hitzewiderstand um Lebensdauer und Reibwert zu verbessern
- Durchschnittlicher Reibungskoeffizient bei 0,42, Temperaturbereich von 20 – 500 Grad C

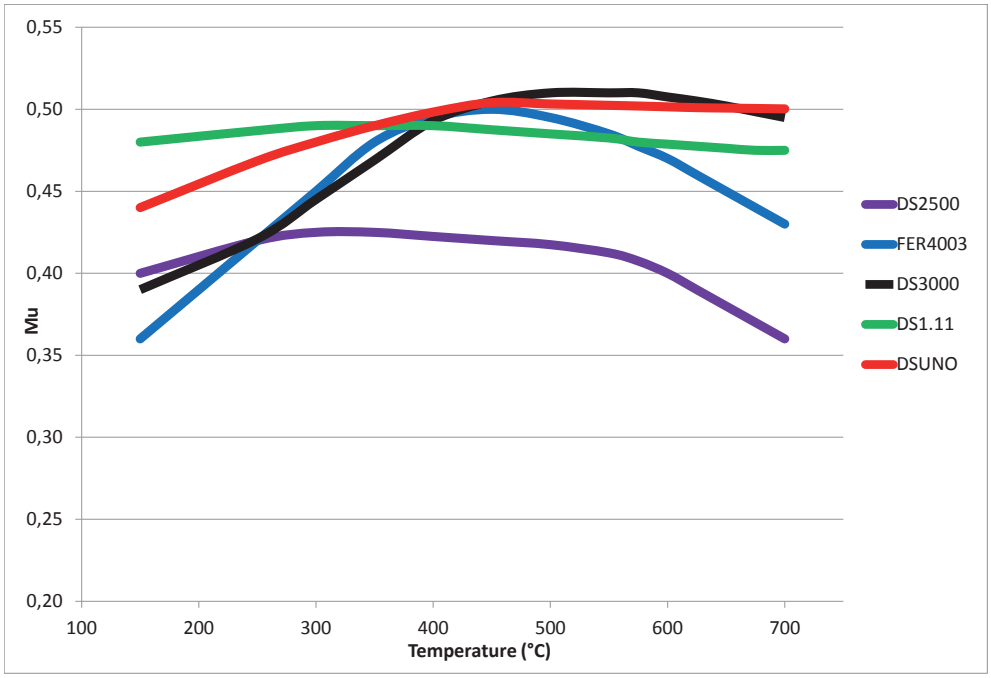
DS3000 (R)

- Der Allrounder für erschwerte Einsatzbedingungen
- Einsatzmöglichkeiten: Tourenwagen, GT, Rally, Einsitzer
- Durchschnittlicher Reibungskoeffizient bei 0,48
- Temperaturbereich 200 – 650 Grad C

FER4003 (C)

- Für leichte bis mittlere Einsatzbedingungen; speziell auf Formel-Fahrzeuge abgestimmt
- Einsatzmöglichkeiten: Formel-Fahrzeuge, aber auch für Rally-Einsätze
- Durchschnittlicher Reibungskoeffizient bei 0,46.
- Extrem kurze Einfahrzeit.
- Temperaturbereich 200 – 450 Grad C.
- Hervorragender Biss.
- schnelles Lösen von der Scheibe.
- Gute Kontrollierbarkeit, verhindert das Blockieren des Rades, gerade dann wenn der Anpressdruck reduziert ist.

日本語 FERODO RACING COMPOUNDS



DS1.11 (W)
- 重量級の耐久仕様の摩擦材
- 適用車種：セダン～GT、レーシングカー
- 平均摩擦係数 0.46, 温度範囲 200°-700°C
- 高耐久性能、
- ディスクへの低攻撃性

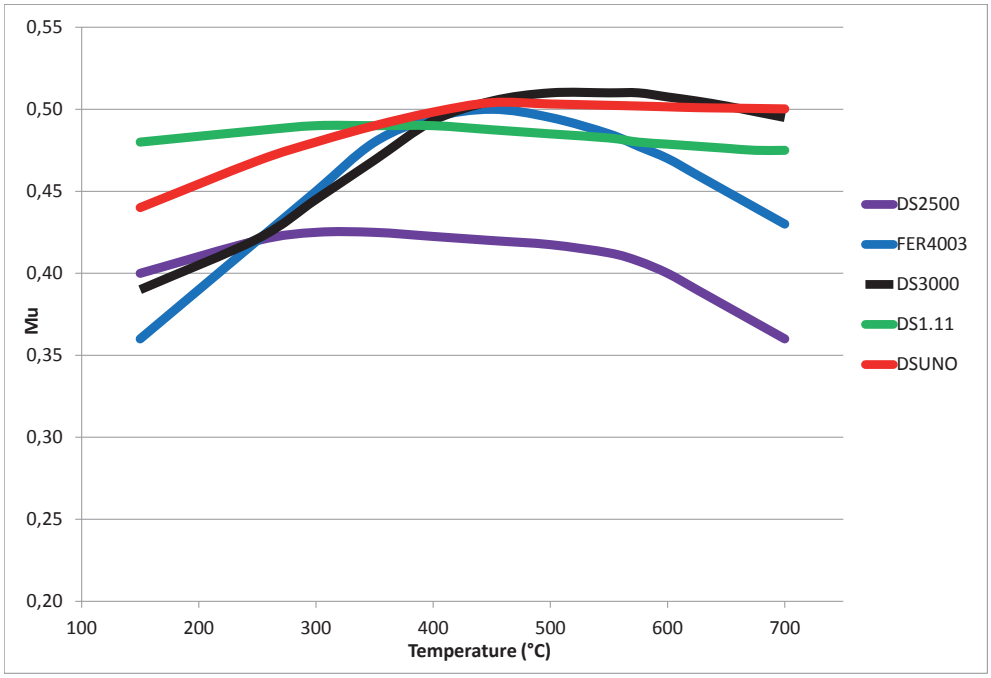
DSUNO (Z)
- 重量級のショートコース～耐久レース用摩擦材
- 適用車種：セダン～GT、レーシングカー
- 平均摩擦係数 0.48, 温度域 200°-700°C
- パワーのある車両にも優れたコントロール性能を発揮
- ディスクへの低攻撃性
- 高耐久性能

DS2500 (H)
- ストリート～サーキット走行用として幅広い車種に使用可能
- 耐久性、制動力、耐熱性をバランスよく設定しレース用の摩擦材でありながら一般道路用にも使用できるようにアレンジ
- 20°-500°C の温度域における平均摩擦係数 0.42

DS3000 (R)
- 軽量級～重量級まで車重量を選ばないオールラウンドな適用性
- セダン、ラリーカー、レーシングカー用と多くの車種に対応
- 平均摩擦係数 0.48, 温度域 200°-650°C

FER4003 (C)
- 特にフォーミュラーカーのライトウエイト向け/ セミレーシング用摩擦材
- 適用車種：フォーミュラーカー、ラリーカー
- 平均摩擦係数0.46, 温度域 200°-450°C
- 短時間のあたりつけ
- 優れたブレーキタッチ
- 引きずりが少なく優れたリリース性能
- 優れたコントロール性能（ホイールロック防止）

中文 FERODO RACING COMPOUNDS



DS1.11 (W)
- 長途賽事或耐力賽專用剎車皮
- 適合-房車賽, 超級房車賽
- 平均摩擦系數 0.46, 最佳工作温度 200~700°C
- 壽命特長
- 不損剎車碟

DSUNO (Z)
- 制動力至強的比賽用剎車皮
- 適合-房車賽, 超級房車賽, 拉力賽
- 平均摩擦系數 0.48, 最佳工作温度 200~700°C
- 操控感特強
- 不損剎車碟
- 耐用性高

DS2500 (H)
- 適合一般車輛用作街道快走和 TRACK DAY 使用
- 擁有原廠皮的舒適度, 以及賽車皮的耐熱及制動效能
- 平均摩擦系數0.42, 最佳工作温度 20~500°C

DS3000 (R)
- 標準型競賽用剎車皮
- 適合-房車賽, 拉力賽
- 平均摩擦系數 0.48, 最佳工作温度 200~650°C

FER4003 (C)
- 方程式賽車專用剎車皮
- 適合-方程式賽車和輕型車種
- 平均摩擦系數 0.46, 最佳工作温度 200~450°C
- 磨合迅速
- 初期制動力特強
- 超低阻力
- 操控敏銳

Bedding of Race Pads

The aim is to bring the pads to full race temperatures, but slowly (too quick bedding results in glazing). This is done by a series of laps where full speeds may be attained but lighter braking pressures are used (i.e. the driver applies the brakes earlier). It is important that the pads are allowed to cool after the bedding process before racing.
Ideally the pads will arrive at temperatures in excess of 500°C during the bedding. Pads smoking during the cool-down is not a cause for concern. Specifically for DS1.11 and DSUNO temperatures should arrive at between 500°C and 700°C (as an indication: green and orange thermal paints applied to discs to turn white completely).

Perform at least 15 trial brake applications, initially with reduced pressures (50% of the normal that might be used for that same brake application were it to occur under race conditions) building up to full decelerations after the 15 applications. To shorten the procedure applications can be made along the straights as well as at corners.

On completion of the trial applications, return to the pit lane. Inspect the surface of the brake pads from the two wheels that have been working the hardest. There should be evidence of contact over the full pad area, but without glazing. The pads are now ready to race. Whilst it is recommended that pads are inspected after bedding, if time does not allow this and paragraph 1 has been carried out appropriately, so long as a short period of time has elapsed to allow the brake system to cool (ideally to below 100°C – this might take in excess of five minutes), the pads will be ready to race.

Rodaggio di Pastiglie Racing

L'obbiettivo in fase di rodaggio è di portare la temperatura delle pastiglie che si avrebbe in condizione di gara ma in modo graduale (se la procedura verrà effettuata in modo troppo rapido si potrà avere il fenomeno della vetrificazione superficiale). Per conseguire tale obbiettivo si potranno svolgere test ad alta velocità, utilizzando pressioni di circa il 50% rispetto alle condizioni gara. Mai usare acceleratore e freno allo stesso momento. E' importante che le pastiglie, dopo il rodaggio, possano avere il tempo di raffreddarsi prima di essere utilizzate in gara. Idealmente le pastiglie dovrebbero arrivare durante tale procedura a temperature intorno ai 500°C. Il fatto che le pastiglie fumino durante la fase di rodaggio non significa che il prodotto abbia un problema. Specifico per il rodaggio delle mescole DS1.11 e DSUNO è che le temperatura arrivi a 500°C e non superi i 700°C. (se usate le vernici termo viranti sui dischi, dovrete vedere virare completamente il verde e l'arancione).

Effettuate circa 15 frenate alla metà della pressione che usereste in gara e mantenetela per piu' tempo rispetto a situazioni di gara. Dopo le iniziali 15 frenate (circa 30 secondi tra una e l'altra) potrete iniziare a raggiungere la massima decelerazione del veicolo (sempre circa 15 frenate). Per accorciare i tempi di rodaggio, queste frenate potranno essere effettuate anche sul dritto e non necessariamente solo nei punti di frenata del circuito.

Terminati questi cicli di frenate tornate nella pit lane per ispezionare le pastiglie. Dovrete vedere che la superficie del materiale d'attrito sia completamente in contatto con il disco (almeno l'80% della stessa) e che non ci siano evidenti problemi di vetrificazione. A questo punto le pastiglie sono pronte per la gara o i test che dovrete effettuare. Nonostante consigliamo l'ispezione delle pastiglie dopo il rodaggio, se il tempo a disposizione non lo consentisse, ma avete espletato la procedura consigliata, sentitevi tranquilli di poter gareggiare ed avere la massima efficacia frenante dal prodotto.

Rodage de plaquettes de course

L'objectif est d'amener les plaquettes aux températures maximales de course, mais lentement (le rodage trop rapide entrainant un glaçage). Cela se fait par une série de tours où les vitesses maximales peuvent être obtenues, mais en utilisant une pression de freinage inférieure (c.-à-le conducteur freine plus tôt). Il est important que les plaquettes puissent refroidir après le rodage et avant la course.
Idéalement les plaquettes arriveront à des températures supérieures à 500°C au cours du rodage. Les plaquettes fumeront lors du refroidissement, cela est normal. Pour les DS1.11 et DSUNO, les températures doivent atteindre entre 500°C et 700°C (à titre indicatif: les peintures thermiques verte et orange appliquées aux disques doivent blanchir complètement).

Effectuer au moins 15 freinages de rodage, d'abord avec des pressions réduites (50% de la pression normale en course) jusqu'à des pressions complètes pour les 15 freinages suivants, et ce toutes les 30 secondes maximum. Pour raccourcir le délai de rodage vous pouvez faire les freinages de rodage en ligne droite ainsi qu' en courbe, et pas nécessairement dans des zones de freinage du parcours.

À l'issue du rodage, revenir aux stands. Inspectez la surface des plaquettes de frein des deux roues les plus en contrainte. Il doit y avoir des preuves de contact sur la surface complète de la plaquette (ou au moins 80%), mais sans apparentes traces de glaçage.
Les plaquettes sont maintenant prêtes pour la course. Bien qu'il soit recommandé d'inspecter les plaquettes après la séance de rodage, si le temps ne le permet pas et que la procédure de rodage ait été correctement faite, attendre un court laps de temps pour permettre au système de freinage de refroidir (idéalement en dessous de 100°C - ce qui peut prendre environ cinq minutes), les plaquettes seront alors prêtes pour la course.

Rodaje Pastilla Racing

El objetivo de la fase de rodaje es la de poner la pastilla en temperatura como la que va a tener en condiciones de carrera pero de un modo gradual (si el procedimiento se realiza de modo muy rápido puede aparecer el fenómeno de cristalización superficial). Para conseguir tal objetivo se podrá realizar a lata velocidad, utilizando una presión de cerca del 50% respecto a las condiciones de carrera. No utilizar nunca el acelerador y el freno al mismo tiempo. Es importante que las pastillas tengan el tiempo suficiente de refrigeración antes de su utilización en carrera. El hecho de que las pastillas produzcan humo durante la fase de rodaje no significa que el producto tenga problemas. El rodaje especifico para la calidad DS1.11 y DSUNO es que la temperatura de la pastilla sea superior a 500ºC pero no superior a 700ºC (Si utiliza las pinturas de análisis de temperatura en los discos el color verde y el naranja deben cambiarse completamente).

Efectuar cerca de 15 frenadas a la mitad de la presión que se realiza normalmente en carrera y mantenerla por mas tiempo que en situación de carrera. Despues de las iniciales 15 frenadas (cerca de 30 segundos entre una y otra) podrá llegar a tener la máxima deceleración del vehiculo (siempre cerca de 15 frenadas). Para acortar el tiempo de rodaje, estas frenadas podrán ser realizadas incluso en línea recta no teniendo que realizarse necesariamente en los puntos de frenada del circuito.

Terminado este ciclo de frenadas volver a la línea de Pit lane para inspeccionar las pastillas. Deberá ver que la superficie del material de fricción ha estado en contacto con la superficie del discos (al menos del 80% de la superficie) y que no se vean signos evidentes de cristalización. Llegado a este punto las pastillas están rodadas para la carrera o test. No obstante recomendamos la inspección de las pastillas después del rodaje si el tiempo que disponemos nos lo permite, pero el proceso se ha conseguido, puedes estar tranquilo de poder tener la máxima eficacia de frenada del producto.

BEDDING

Einfahren Von Renn-Bremsbelägen

Das Ziel ist, die Beläge auf volle Renntemperatur zu bringen, aber langsam (zu schnelles Einfahren bewirkt Verglasung). Dies geschieht in einer Reihe von Runden, wo volle Geschwindigkeit erreicht werden kann, jedoch mit leichteren Bremsvorgängen (der Fahrer bremst früher). Es ist wichtig, dass die Beläge nach dem Einfahren abkühlen können, bevor das Rennen startet. Idealerweise erreichen die Temperaturen mehr als 500°C während des Einfahrens. Rauchende Beläge während des Abkühlens sind kein Grund zur Sorge. Speziell bei den DS1.11 und DSUNO sollten die Temperaturen zwischen 500°C und 700°C liegen (als Hinweis: grüne und orange Thermofarbe auf den Scheiben sollte komplett weiß werden).

Machen Sie wenigsten 15 Bremsvorgänge, anfangs mit reduziertem Druck (50% des normalen, bei gleichem Bremsvorgang unter Rennbedingungen) bis zum vollständigen Abbremsen nach 15 Vorgängen. Um das Einfahren abzukürzen, kann dies sowohl auf gerader Strecke als auch in Kurven erfolgen.

Nach Abschluss der Bremsversuche kehren Sie in die Boxengasse zurück. Untersuchen Sie die Oberfläche der Bremsbeläge der beiden Räder, die am härtesten beansprucht worden sind. Es sollten über die gesamte Bremsbelags fläche Kontaktspuren zu sehen sein, jedoch ohne Verglasung. Die Beläge sind rennfertig. Obwohl empfohlen wird, die Beläge nach dem Einfahren zu untersuchen, die Zeit fehlt, jedoch §1 sorgfältig ausgeführt wurde und sofern kurze Zeit vergangen ist, um das Bremssystem zu kühlen (idealerweise unter 100°C – geschieht in ca. 5 Minuten), können die Beläge im Rennen eingesetzt werden.

レーシングパッドの慣らし

慣らしの目的はパッドの温度をレース本番相当に上げることです。ただしゆっくりと
行います（急激に温度を上げると表面硬化してしまい、性能劣化を引き起こします）
サーキットで徐々速度を上げていき、軽めの踏力でブレーキングを始めてください。
最終的にはフルスピードからのブレーキングを行います。その後、走行しながら冷却
して下さい。
慣らしの間に、パッド温度が500℃位になるのが理想的で、冷却中に煙が出てくるのは
問題ありません。特にＤＳ１.１１とＤＳUNOの場合は500℃から700℃くらいの間に
なるのが理想です。それはサーモペイントの緑、オレンジが完全に変色する状態です。

15回程、軽めのブレーキングを行います（レース本番の５０％程の踏力）
慣らしを早めに行うためにストレートでブレーキングしてもかまいません。

その後、ピットに戻り、過激に使われている左右のパッドの表面を確認して下さい。
（通常フロントです）パッド全体に当たりが出て表面が硬化していなければ、完了です。
もし、パッドの確認ができない場合は、5分くらい冷やせば（100℃以下）大丈夫です。

競賽煞車片的磨合

目標是以循步漸進的方式把煞車片提升至比賽温度，以鞏固及提升煞車片的性能。（太快速的磨合會令煞車片的表面磨成光滑，仿似鏡面，影響效能。）
競賽煞車片的磨合最好是在賽車場上跑兩三圈來完成。駕駛方法及速度跟平常一樣，而最重要的就是`提早煞車'（並將煞車力度減至平常的一半，即約50%）。

重覆以上煞車動作15次。下一步是以漸進式增加煞車的力度(約10次)，直至力度恢復到平常一樣(即100%)。當煞車片的温度提升至超過500℃，再經過冷卻之後，整個磨合過程便已完成！(DS1.11及DSUNO的磨合温度比一般更高，達500至700℃。此時塗在煞車碟上的綠色及橙色温度漆均已變成白色。)

如時間許可，當完成磨合過程之後，將車駛回維修站通道，檢查煞車片是否已完全磨合(全面接觸)，並且沒有產生光面。但是如果時間緊迫，只需於完成磨合之後，給大約15分鐘時間煞車片冷卻至100℃以下，便可以進行比賽!

SILOXANE

In the braking world, “Ceramic” is a word that is heard a lot. However “Ceramic” can merely indicate that the product contains something, anything, that is not “organic.” Organic means a substance whose molecular structure is largely based upon carbon. However for an engineer to understand a material as ceramic, he or she knows that this must mean that its performance defining core must be non-organic. In the case of a friction material this is the resin – the glue which holds the pad together; the matrix that holds the other components in place, allowing them to do their job. For over 100 years this job has been, and continues to be done in brake pads almost exclusively by a phenolic resin. A highly durable, versatile binder, yet resolutely an “organic” material.

The appeal of a non organic based brake pad is simple: Phenolic resins begin to decompose at temperatures above 300-400°C. In a racing pad, where these temperatures would be regarded as a operating minimum that’s bad news. It means the pads wears more as the carbonaceous material decomposes, that the pedal becomes spongy as the pad looses its rigidity and that the brake will fade, as gaseous decomposition products try to escape at the disc/pad interface. The problem is, no one had ever found a viable alternative to the phenolic based brake pad, aside from the sintered metal compounds. These latter materials work well in motorcycle racing, but the far higher weight of a car makes heat transfer to the caliper an almost insurmountable problem in auto racing. Additionally, as essentially an incompressible block of metal, sintered pads are often judged to lack the “feel” that a racing driver requires, being little more than an on/off switch for the brake.

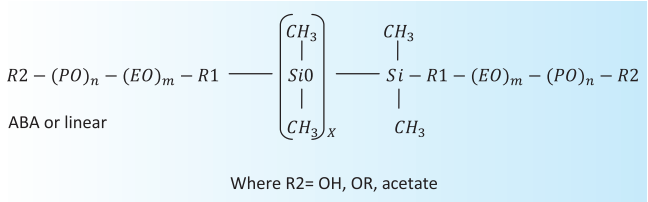
However, in DS1.11 and DSUNO Ferodo Racing can offer a true “ceramic” race brake pad. The resin binding system replacing the traditional phenolic is described as a “Siloxane” In layman’s terms, this means that the 3D molecular network that holds the pad together is formed from chains of silicon rather than carbon atoms. These are impervious to temperature. In fact, at about 700°C, they actually undergo a chemical phase transition which actually pulls the pad together even more strongly. Additionally, the cured (i.e “set” during the manufacturing process) resin, being a hard, abrasive ceramic, has friction enhancing properties. So there’s a double benefit. No phenolic carbon to decompose so wear is low and an abrasive substructure that keeps the friction coefficient (μ) high!

DS1.11 is recommended for FIA GT, Touring Car, Formula cars, Group N and Stock Car (NASCAR) in the USA. DSUNO is used in rally applications and sprint races, though drivers who appreciate it’s very high friction have also been using it for touring car and group N applications too. Both are characterized by long life, high μ and a firm pedal under all conditions, but the torque profile of DS1.11 during a brake application is flat, whilst that of DSUNO rises, making them complementary compounds, depending on vehicle type and driver preference.

THE BACKGROUND: PERFORMANCE REQUIREMENTS

Whilst issues of Noise, Vibration and Harshness (problems associated and known in the industry by the generalised abbreviation “NVH”) have become of paramount importance for the braking of road vehicles, they are of little concern in racing. Broadly speaking the performance requirements on the track are as follows:

High Friction. Very high decelerations are required, often from systems that are not servoassisted. The combination of aerodynamic downforce and large, sticky tires means that the limiting factor in braking is often the force applied via the driver’s foot rather than road/tire adhesion. The requirement for maximum braking torque from the available muscle power means that materials with a high coefficient of friction μ are preferred - in other words those materials that translate the highest possible percentage of the applied force into vehicle deceleration No fade. Fade is the term used for a decrease in friction performance at high temperatures. High vehicles speeds, high decelerations, frequent brake applications and limited cooling (ducting air creates drag) means that discs and pads get very hot – upto 900°C. Yet İ must be maintained even under these extreme conditions.
Low pad compressibility. This results in shorter pedal travel, one of the driver’s key requirements. Ideally the pad compressibility will be the same at all temperatures and will not change throughout a race.
The “right” friction history. This is sometimes called “stop shape” or “time history” and refers to how the friction coefficient varies through a brake application. As such it is the response of the braking system to increasing temperature with decreasing speed. This is as close to an objective description of the hard-to-define brake “feel” as is possible to make.
Generally speaking, drivers of cars with greater downforce prefer a flat response (this is because the last thing a driver needs is friction ramping up at the apex of the bend, just as downforce is reducing due to his lower speed: result; wheel lock!) whereas those vehicles with less downforce often prefer rising friction through the stop. DS1.11 is an example of a material with a flatter stop shape, whilst DSUNO has a rising torque output (see graph) Initial bite. How quickly the brake responds to the driver’s pedal. Almost exclusively, the quicker the better.
Pad and Disc life. Not always important but vital in endurance racing where the number of pit-stops must be minimised and, not least, economically in that fewer disc and pad changes means fewer disc and pad purchases.



Generalized chemical structure of siloxane.

BRAKE FLUIDS

All fluids are of Glycol based ether composition, and are suitable for brake and clutch use. Additionally they have the following characteristics:

		DOT5.1	Ferodo Formula	Ferodo Super Formula
Technical Details: Typical measured values	Dry boiling point (°C)	270	310	328
	Wet boiling point (°C)	185	205	200
	Kinematic Viscosity (cSt)	800	1650	1500
Availability	0,25 litre	FBZ025	n/a	n/a
	0,50 litre	FBZ050	DSF050	FSF050
	1 litre	FBZ100	n/a	n/a
	5 litres	FBZ500	n/a	n/a

Bottles are sold in complete boxes only

Box = 24 bottles
Box = 12 bottles
Box = 4 bottles

WARNING:
Recommended for use by experienced mechanics only

Contains polyalkylene glycol ether and other esters. Keep out of reach of children. Avoid excessive skin contact.
If swallowed, seek medical advise and show the container. In case of eye contact, flush with water for 10 minutes.

DOT5.1

- Recommended for road use
- Adheres to DOT 5.1 specification
- Low viscosity means ideally suited for ABS/ESP braking systems
- Low viscosity down to -40°C allows use under all conditions
- Available in 4 bottle sizes
- Low corrosion
- Very low rubber swell

Ferodo Formula

- Recommended for track day & race use
- High wet and dry boiling point
- Low corrosion
- Low rubber swell
- Low viscosity for a race fluid (falls within DOT 4 road spec allowing road use)

Ferodo Super Formula

- Premium Product
- Recommended for race use
- Market leading high wet and dry boiling point
- Very low corrosion, with additives to render more compatible with Mg components
- Low rubber swell
- Super-low viscosity for a race fluid of such high B.pt. (falls within DOT 4 road spec allowing road use)
- Super high lubricity → reduces clutch component wear even in problem applications.
